

Meet Tango Super PC: The World's Most Powerful Cell Phone Size Windows Business PC

A Lowest TCO Business PC for Knowledge Workers for office, roaming and home use

For the First time ever, through our patent pending technology, a PC is separated from its heatsink and fan. The result is a massive 35 watt PC in a cell phone size, weighing only 7 ounces, with no vents and no fan.

Cell phone size Business PC Everywhere for Everything

Knowledge workers can carry Tango PC in a shirt pocket or a purse everywhere, along with all their applications, full Windows OS and data, allowing them to work at multiple offices and home with a seamless experience.

Tango PC lowers TCO. It has no screen, no moving parts, and can be shipped in a bubbled envelope for maintenance, reducing onsite support.

As Seen On

Tango PC has a mainstream 25W i3 class quad-core 2GHz CPU with integrated CAD supporting GPU. RAM and SSD are user-upgradable up to 8GB and 1TB respectively using off-the-shelf components.

Tiny and inexpensive docking stations can be placed at every work desk, meeting rooms and home for plug and play experience with full desktop productivity.

Tango runs Windows 7/8.1, Linux/Chromium, with no special drivers.

You can save \$\$\$ in hardware and software costs, if you replace an Enterprise PC, and a Home PC with Tango.
